

## Statewide Summary of Breath Alcohol Data For Year 2004

The following report summarizes the breath alcohol data obtained from BAC Datamaster breath test instruments in association with DUI arrests performed during the year 2004. Only breath alcohol results of 0.01 g/210L are included in this summary. This summary should be considered an approximation since the accuracy, in several respects, depends on the reliability of the data entered and the successful transmission to the host computer.

The following table shows the average breath alcohol concentration for each age group

22.4% of the DUI arrests statewide were done in King County for 2004. 80% of the tests performed in 2004 had a generic code entered for the Liquor Board License Number (i.e., 9A000000). This means that 20% had an actual Liquor Board License Number entered as the place where the subject was last drinking.

The following shows the top twenty liquor licensed establishments which were identified the most in our breath test database.
